

1. Project Overview

The objective is to develop a Team Management Application with Role-Based Access Control (RBAC) that enables Employees, Team Leaders, HR Personnel, and Managers/Administrators to access and manage information according to their assigned responsibilities.

The system will have four core access levels, with permissions increasing progressively from Employee to Manager/Admin. In addition to the original scope, this revised document adds Face Recognition Attendance, Payslip Generation, ID Card Generation, Team Groups & Member Management, Event & Task Management, Office-wide and Team-level Meeting Management, Payment Update tracking, Employee Sales Targets (TGT), Individual Employee Document Management, Onboarding & Relieving (Exit) Management, a separate HR login/module, and a Client Management module covering client follow-up, client alerts, interviews, and daily client updates.

2. User Roles & Access Levels

Level 1 – Employee

Employees will have access to their own work-related information and activities.

- View own attendance (including face recognition check-in/check-out)
- Attendance history/calendar
- Daily production/work updates
- Daily calling/activity updates
- Daily client update entries
- View own sales
- View own sales target (TGT) vs achievement
- View own collections
- Submit leave requests
- Track leave request status
- View personal performance information
- View and download own payslips
- View own ID card
- View own individual documents
- View assigned events, tasks, and meeting schedules
- View own client follow-up list and reminders/alerts
- Secure login and profile management

Level 2 – Team Leader / Supervisor

Team Leaders will manage and monitor employees assigned to their team.

- Team dashboard
- View assigned team members and team groups
- Create and manage team member groups
- Monitor team attendance (incl. face recognition logs)
- Monitor daily production/calling and daily client updates

- Monitor sales, collections, and sales targets (TGT) for the team
- Review employee performance
- Review and approve/reject leave requests
- Monitor pending activities
- Create and assign events and tasks to team members
- Schedule and manage team-level meetings
- Track client follow-ups and client alerts for the team
- Team-wise reports
- Individual employee performance tracking
- Team productivity analysis

Level 3 – HR / Administrative Level

HR users will have administrative visibility over teams and Team Leaders, accessed through a separate HR login and dashboard.

- Separate, dedicated HR login and HR-only module access
- HR dashboard
- Monitor Team Leaders and their teams
- Monitor individual/team performance
- Review organizational attendance (incl. face recognition data)
- Monitor production and payment-related data
- Audit user-level targets, including sales TGT
- Monitor target achievement
- Review approval workflows
- Compliance monitoring
- Employee/team records management
- Generate and manage employee payslips
- Generate and issue employee ID cards
- Access individual employee documents
- Manage onboarding details for new joiners
- Manage relieving/exit details for departing employees
- Schedule and track candidate interviews
- Monitor company-wide events, tasks, and meetings
- Monitor client follow-up and client alert compliance
- HR reports and analytics
- Identify pending approvals and exceptions

Level 4 – Manager / Admin

Managers/Admins will have complete system-wide access and control.

- Global management dashboard
- Complete organization overview
- Access to all teams, employees, and team groups

- Global attendance and performance reports (incl. face recognition audit)
- Global document and report access, including individual employee documents
- Final payment verification
- Payment approval/rejection and payment status updates
- System-wide production, sales target (TGT), and collection monitoring
- Full access to onboarding and relieving/exit records
- Full access to interview and recruitment records
- Full access to client follow-up, client alerts, and daily client updates
- Approve payslip and ID card templates and generation
- Create, manage, and oversee company-wide events, tasks, and meetings
- User role management
- Role hierarchy management
- Create, update, deactivate users
- Assign employees to teams and team groups
- Assign Team Leaders
- Configure system settings
- Organization-wide reports
- Complete audit and oversight functionality

3. Attendance Management

The application will provide a centralized attendance system with role-based visibility, including biometric face recognition.

NEW ADDITION

- Face recognition-based attendance check-in and check-out
- Fallback manual/geo-tagged attendance option for exceptions
- Daily attendance recording
- Attendance calendar
- Attendance history
- Employee-wise attendance
- Team-wise attendance
- HR-level attendance monitoring
- Organization-wide attendance reporting
- Attendance status tracking

Face recognition requires camera-enabled devices and a liveness-detection check to prevent spoofing; specific hardware/device requirements to be finalized during technical design.

4. Production & Activity Management

The system will allow employees to record daily work activities and enable higher-level users to monitor them.

- Daily production entry
- Calling/activity entry

- Daily client update entry (new)
- Employee-wise activity tracking
- Team-wise activity monitoring
- Production targets
- Target achievement tracking
- Daily performance monitoring
- Management-level production reports

5. Sales & Collection Management

The application will support sales and collection tracking, including individual sales targets (TGT).

- Employee sales entry

NEW ADDITION

- Employee sales target (TGT) setting and tracking
- Sales target vs. achievement dashboard
- Daily collection entry
- Employee-wise sales reports
- Team-wise sales reports
- Collection monitoring
- Target vs. achievement
- Pending collection tracking
- Management-level sales/collection dashboard

6. Leave Management

A role-based leave approval workflow will be implemented.

Workflow: Employee → Team Leader → HR/Admin → Manager/Admin, where applicable.

- Submit leave request
- Leave request history
- Pending/approved/rejected status
- Team Leader approval
- HR monitoring
- Admin-level oversight
- Leave reports

7. Performance & Target Management

The system will provide performance monitoring across all organizational levels.

- Individual targets, including sales TGT
- Team targets
- Daily/monthly performance

- Target vs. achievement
- Productivity tracking
- Employee performance analysis
- Team performance analysis
- Team Leader performance monitoring
- HR-level target auditing
- Management-level performance reports

8. Payment Verification & Payment Update

A dedicated payment verification module will be available for authorized users, along with a payment update workflow for status changes.

- Payment records
- Payment line-item verification

NEW ADDITION

- Payment update entry (status, amount, remarks) by authorized roles
- Payment update history/audit trail
- Pending payment list
- Payment approval
- Payment rejection
- Payment status tracking
- HR-level monitoring
- Final Manager/Admin approval
- Payment reports

9. Payslip Management

NEW ADDITION

A payslip generation and distribution module will allow HR/Admin to generate monthly payslips, which employees can securely view and download.

- Monthly payslip generation per employee
- Configurable payslip template (earnings, deductions, net pay)
- Bulk payslip generation for a team/organization
- Employee self-service payslip download (PDF)
- Payslip history/archive
- HR/Admin edit and approval before publishing
- Payslip access restricted to the employee, HR, and Manager/Admin

10. Employee ID Card Generation

NEW ADDITION

The system will support generation of digital and print-ready employee ID cards.

- Configurable ID card template with company branding
- Auto-population of employee photo, name, ID number, role, and department
- Digital ID card viewable in the employee app/profile
- Print-ready ID card export (PDF)
- HR/Admin approval before issuance
- ID card reissue on role or detail changes
- ID card status tracking (active/deactivated) tied to employment status

11. Document & Report Management

Higher-level users will have access to organizational documents and reports based on permissions.

- Employee reports
- Team reports
- HR reports
- Production reports
- Sales reports
- Collection reports
- Attendance reports
- Performance reports
- Payment reports

NEW ADDITION

- Individual employee document repository (ID proofs, certificates, contracts, offer letters, etc.)
- HR and Manager/Admin access to individual employee documents
- Document access control
- Download/export reports

12. Onboarding & Relieving (Exit) Management

NEW ADDITION

A dedicated module to manage the employee lifecycle from onboarding through relieving, accessible to HR and Manager/Admin.

Onboarding

- New joiner profile creation and document collection
- Onboarding checklist and status tracking
- Offer letter and joining letter records
- Probation period tracking

Relieving / Exit

- Resignation/relieving request initiation
- Exit checklist and clearance tracking (assets, dues, handover)
- Relieving letter and full-and-final settlement records

- Exit interview notes (HR access)
- HR and Manager/Admin access to complete onboarding/relieving history

13. Recruitment & Interview Management

NEW ADDITION

A recruitment module to help HR manage candidate interviews.

- Candidate profile entry
- Interview scheduling and calendar
- Interview status tracking (scheduled/completed/selected/rejected)
- Interviewer feedback/notes
- Interview-to-onboarding handoff for selected candidates
- HR-level recruitment reports

14. Client Management

NEW ADDITION

A client management module will help employees and teams track client contacts, follow-ups, and daily updates.

- Client master records with client contact number(s)
- Client follow-up scheduling per employee
- Client follow-up status tracking (pending/completed/converted)
- Automated client alerts/reminders for due or overdue follow-ups
- Daily client update entry by employees
- Team Leader/HR/Manager visibility into client follow-up and update history
- Client-wise and employee-wise follow-up reports

15. Team Members Group Management

NEW ADDITION

The system will allow Team Leaders and Admins to organize employees into groups within a team for easier coordination.

- Create and manage team member groups
- Assign employees to one or more groups
- Group-wise task, event, and meeting assignment
- Group-wise activity and performance visibility

16. Event & Task Management

NEW ADDITION

A module for creating, assigning, and tracking events and tasks across the organization.

- Create events (company-wide, team, or group level)

- Create and assign tasks to individuals, groups, or teams
- Task status tracking (pending/in-progress/completed/overdue)
- Due dates, priority levels, and reminders for tasks
- Event/task calendar view
- Notifications for new/updated events and tasks
- Team Leader/HR/Manager visibility into task completion status

17. Meeting Management

NEW ADDITION

The system will support scheduling of both organization-wide office meetings and separate team-level meetings.

- Office-level meeting scheduling (all employees/departments)
- Separate team-level meeting scheduling (per team/group)
- Meeting calendar and invitations
- Attendee list and RSVP/attendance tracking
- Meeting agenda and minutes/notes
- Meeting reminders/notifications
- HR/Manager visibility into meeting history across teams

18. Role-Based Access Control

A core part of the project will be implementing a secure RBAC system.

Permission hierarchy

- Employee → Own data
- Team Leader → Assigned team and group data
- HR → Teams and Team Leaders under their administrative scope, via a separate HR login
- Manager/Admin → Complete organization/system access

The system will prevent users from viewing or modifying information outside their authorized permissions, including payslips, ID cards, individual employee documents, onboarding/relieving records, and interview data.

19. User & Organization Management

Manager/Admin users will be able to:

- Create users
- Edit user information
- Deactivate users
- Assign roles
- Change roles
- Assign employees to teams and team groups
- Assign Team Leaders
- Manage HR users and their separate HR login access

- Manage organizational hierarchy
- Control user permissions

20. Dashboards

Separate dashboards will be developed according to each role.

Employee Dashboard

- Attendance (incl. face recognition status)
- Production
- Sales & sales target (TGT)
- Collections
- Leave
- Personal performance
- Payslips
- ID card
- Assigned tasks, events, and meetings
- Client follow-up list and alerts

Team Leader Dashboard

- Team attendance
- Team production
- Team sales & TGT
- Team collections
- Leave approvals
- Team performance
- Team groups overview
- Team tasks, events, and meetings
- Team client follow-up status

HR Dashboard

- Organizational compliance
- Team Leader monitoring
- Targets, including sales TGT
- Production
- Payment data and payment updates
- Approval status
- Payslip and ID card generation status
- Onboarding and relieving pipeline
- Interview pipeline
- Client follow-up and alert compliance

Manager/Admin Dashboard

- Global statistics
- Organization performance
- Financial/payment verification and updates
- Reports
- User management
- Role hierarchy
- System configuration
- Onboarding, relieving, and recruitment overview
- Organization-wide events, tasks, and meetings

21. Notifications & Alerts

The system may include notifications for:

- Leave requests
- Leave approvals/rejections
- Pending approvals
- Target achievement
- Attendance issues
- Payment verification and payment updates
- Client follow-up alerts (new)
- Interview schedule reminders (new)
- Task and event reminders (new)
- Meeting invitations and reminders (new)
- Payslip and ID card issuance (new)
- Important administrative actions

Notifications can be implemented through in-app notifications and, where required, email/SMS/WhatsApp integrations.

22. Reports & Analytics

The application will provide role-based reports including:

- Attendance reports (incl. face recognition logs)
- Production reports
- Calling/activity reports
- Sales & sales target (TGT) reports
- Collection reports
- Leave reports
- Target reports
- Performance reports
- Payment reports, including payment updates

- Payslip reports
- Onboarding/relieving reports
- Interview/recruitment reports
- Client follow-up and daily client update reports
- Team-wise reports
- Employee-wise reports
- Organization-wide reports

Reports may be available for viewing, filtering, and exporting.

23. Security & Audit

The application will include:

- Secure authentication
- Separate HR login/authentication module
- Role-based authorization
- Permission-based API access
- Password security
- Session management
- Restricted data visibility, including for payslips, ID cards, and personal documents
- Secure storage of face recognition data with appropriate consent handling
- Administrative audit logs
- Tracking of important approval actions, including payment updates
- User activity monitoring
- Secure database access

24. Admin Configuration

Manager/Admin users will have system configuration capabilities including:

- User role configuration
- Team and team group configuration
- Organizational hierarchy
- Target configuration, including sales TGT
- Approval workflow configuration
- Payslip and ID card template configuration
- Event, task, and meeting configuration
- Client alert/follow-up rule configuration
- System settings
- Report access configuration

25. Proposed Application Components

The overall solution can consist of:

- Employee Web/Mobile Interface
- Team Leader Dashboard
- HR Dashboard (separate login)
- Manager/Admin Dashboard
- Face Recognition Attendance Module
- Payslip Generation Module
- ID Card Generation Module
- Onboarding & Relieving Module
- Recruitment & Interview Module
- Client Management Module
- Event & Task Management Module
- Meeting Management Module
- Backend/API
- Database
- RBAC & Authentication Module
- Reporting & Analytics Module
- Notification System
- Audit & Security Module

26. Project Deliverables

The development scope will include:

- UI/UX design
- Responsive application interface
- Frontend development
- Backend/API development
- Database development
- RBAC implementation
- Authentication system, including separate HR login
- Employee module
- Team Leader module
- HR module
- Manager/Admin module
- Attendance module with face recognition
- Production module
- Sales & collection module, including sales target (TGT)
- Leave management
- Target & performance module

- Payment verification and payment update module
- Payslip generation module
- ID card generation module
- Individual employee document management
- Onboarding & relieving (exit) module
- Recruitment & interview module
- Client management module (follow-up, alerts, daily updates)
- Team member group management
- Event & task management module
- Meeting management module (office-wide and team-level)
- Reports & analytics
- Notifications
- Security and audit functionality
- Testing and bug fixing
- Deployment and production setup

27. Final Objective

The final application will provide a centralized team-management platform where every user receives access according to their organizational role. The system will create a clear hierarchy:

Employee → Team Leader → HR → Manager/Admin

This structure will ensure controlled data access, transparent approval workflows, employee lifecycle management (onboarding to relieving), biometric attendance, payroll and identity documentation, client relationship tracking, coordinated events/tasks/meetings, employee performance monitoring, organizational reporting, and complete management oversight.
